Albrecht, Ulrich 245—259, 411—441  
Altmann, Jürgen 343—356  
Aupers, Gerard J. 191—195  
  
Bischak, Greg 81—97  
Brzoska, Michael 385—397  
Burg, Fenna van den 149  
  
Dennen, Hans van der 197—203  
Dumas, Lloyd J. 1—10, 293—303  
  
Feldman, Jonathan M. 99—116  
  
Gál, Peter 357—369  
Gerrits, André 231—239  
Gerritsma, Henk B. 205—212  
Gsponeer, André 444—450  
  
Harbor, Bernard 371—383  
Hurni, Jean Pierre 444—450  
  
Jongman, Bert 197—203  
  
Krinsky, Robert 33—51  
  
Lange, Herman de 187—195  
Lock, Peter 385—397

Melman, Seymour 143—147  
Nobel, Jaap 167—173  
  
Peattie, Lisa R. 11—20  
Pianta, Mario 53—79  
  
Quigley, Paul 21—32  
  
Renner, Michel G. 129—141  
Rilling, Rainer 317—342  
  
Saperstein, Alvin M. 305—316  
Schofield, Steve 117—127  
Schrijver, Nico 175—185  
Schwartz, Charles 399—409  
Southwood, Peter 117—127  
  
Thee, Marek 261—292, 443—469  
Tromp, Hylke W. 151—158  
  
Veer, Ben ter 213—222  
  
Walraven, Guido 223—230  
Wilde, Jaap de 159—166  
Woodhouse, Tom 117—127

# Subject Index 1988

**Antimatter technology:** assessment of physicists 463–469; dossier 443; military use 444, 450–458; need for altertness 468–469; programme 461–462; propellants 460–462; questionnaire to physicists 462; research 305, 443–469; 'science fiction' substantialized 443–444; underestimated 458–459; weapons 444–450.

**Arms control:** INF Treaty 271; reduction of nuclear weapons 271, 273; restraints in military technology 255–257, 289, 306, 308–310, 354, 403–409, 431–438; space laser weapons 353–354; UN role 247.

**Arms trade:** commercialization 374; domestic procurement & export 31; excess production 21–22; export pressures 372; government support 30; importing countries 30; international competition 30; US military aircraft 22–30; weapon export 21–22.

**Arms race:** action-reaction 274; arms exports 21–32, 286; arms production 374–378; attitudinal asymmetries 275; behavioural-doctrinal determinants 275; Brazil 377–378; economic conversion 1, 11–12; expenditures 3, 286, 293–295; costs 1, 269, 294–295, 306; dynamics 274–278, 306; economic consequences 1–4, 288; employment 293; energizers 275; functional determinants 272; impact of military technology 264, 269–275, 305, 315, 371–372, 429–430, 436; India 377; intensity 264; Israel 374–375; laser weapons 344–345; lunacy 399–400; military-industrial complex 275; military laboratories 275; myth and myopia 293; new technologies 271–274; new weapon systems 273; nuclear deterrence 275; nuclear revolution 188–190; nuclear weapons 81–97, 187–188, 430–431; open-ended 276; organizational innovations 313–315; political economy 275; prenuclear conceptions 187–190; regional proliferation 269; role of scientists 289, 399–409; SDI 62–67, 271–272, 275–276, 297, 343–347; security 1; South Africa 375–377; state-political bureaucracy 275; strategic stability 343–354; superpower competition 274; technological breakthrough junctures 275; technological imperative 277; technology as stabilizing factor 311–313; US nuclear production 83–91; US standard of living 299; weapon obsolescence 269.

**Disarmament:** nuclear 81–83; role of governments 247; role of science and technology 261–292; UN dilemmas 246–247; UN experts 249.

**Economic conversion:** analysis 8; arms exports 21–32; arms race perspective 1, 11–12, 293; changing nature 4–5; conceptual clarity 129–131; conflict mechanism 134–137; constituencies 137–139; corporate barriers 105–107; criteria & objectives 139–140; critical link 6–8; debate reevaluation 117–120; development coalitions 110–112; employment 126–127; goals & visions 13; high technology 70–75; idealism & realism 19–20; industry & military 131–133; law 143–147; limits 108–110; local initiatives 99–100, 112–113; local strategies 99–116; location 146–147; macroeconomic policy 5–6; militarized economy 13–15, 18–19; military procurement 126–127; military R&D 289; nature 299–301; nuclear disarmament 81–83; nuclear weapons production 91–96; obstacles 100–105, 301; occupational retraining 144–145; opportunities 301–303; organizing ideas 15–18; planning 143–146, 289, 301–302; political economy 12–13, potential 8–9; prerequisites 144–146; role of technology 133–134; set of organizing ideas 11–20; social change 139–140; technology programmes 53–79; UK defence industry 123–126; United Kingdom 117–127; US higher education 33–51.

**Economic development:** debt crisis 373; dominant and dependent economies 359–360, 369; effects of technological progress 357–358; impact of military R&D on developed countries 279–284, 372; impact of military R&D on developing countries 286–288, 367–369, 385–386; impact of science and technology 261–292; new industrialized countries 359, 362; North-South polarization 278, 286–288, 362, 385–396; opportunities of economic conversion 301–302; role of independent R&D 361; role of military R&D 264, 278–288, 329–330, 367–369, 385–396; R&D/GDP ratio 363, 373; R&D in developing countries 361–367; spinoff from R&D 2, 245, 251, 284–286, 295–296, 298–299, 329–330, 422–423; transnational corporations 360; trends in technological development 358–359.

**Education:** academia & military 33–34; conversion 47–48; international affairs 43–46; militarization 33–51; natural and physical sciences 34–43; peace education in Holland 205–211.

**International relations:** cold war 171; complex interdependence 161–162; conflict 169; Eastern

Europe 231–232; economic decision making 179–183; economic diplomacy 178–179; economics 160, 175–178; global decision making 175–185; gradual change 184; international organizations 175–185; liberal view 168–169; Polish crisis 231–238; pluralist paradigm 168–169; power relations 160–161, 167, 169–170, 188; realism versus interdependence 167–172; role of nuclear weapons 187–189; Soviet behaviour 171, 231–238.

**Military R&D (science-based military technology):** arms production 374–378; birthplace 265; brain-drain 298–299; breakthrough technologies 270, 272, 275, 310–311; capital-intensiveness 278, 287; characteristics 334–335; concept 413–416, cycles 322–323; daily objective 270; data problems 380–381, 416–419; defence of 306–307; definition 264–265, 317–318, 414; direction 423–424; economic burdens & opportunities 293–303; economic motives 426–428; ethical dilemmas 245, 289, 399–400; exercising judgement 306–308; expansion 269–271, 273, 277–278, 288; expenditures 253–255, 267–269, 276, 280–281, 323–328, 336–342, 387, 400–401; Federal Republic of Germany 317–342; follow-on imperative 277; gestation periods 276; global budget 267–268; impact on armaments dynamics 269, 274–278, 288, 305, 385, 429–431, 436; impact on economic development 264, 278–288, 329–330; impact on North–South polarization 278, 286–288, 385–396; impact on R&D in toto 252; imperative logic 385; implications for developed countries 279–284; India 288; institutional setup 276–277; international transfers 255–257; laser technology 343–347; lead-times 251, 276, 415, 420–421; Manhattan project 265, 310; manpower 268, 276–277, 289, 401; mechanism 424–425; militarism 395–396; military force multiplier 267, 269; mode of operation 276–278; monitoring of 255; moral issues 245–246, 401–402; natural & physical sciences 35–43; neglect by social scientists 258; nuclear 82–91, 430–431; opportunity costs 389–391; order of magnitude 267–269; political motives 425–426; political resistance 402–403; PRIO 258–259; resources 243; resource absorption 388–389; restraints 255–257, 289, 306, 308–310, 354, 403–409, 431–438; scientists & engineers 3, 268, 276–277, 289, 300, 305, 399–409; scope 420–423; SDI 62–67, 328; secretiveness 278–279, 298–299, 319–320, 434; security costs 391–394; SIPRI 258–259, 317; spinoff 2, 245, 251, 284–286, 295–296, 298–299, 329–330; technological imperative 277; technological landscape 53–55; technological misconceptions 296–298; technological policy 310–311; technological programmes 53–79;

Third World military R&D 287–288, 367, 369; traits 278; triple wickedness 288–289; UN study 245–247, 411–441; use 245–259, 413–416, 425–430; worst-case planning 275.

**Military strategy:** Discriminate Deterrence 271–273; offense and defence 272; SDI aims 272.

**Nuclear weapons:** CI<sup>3</sup> technologies 271; conventional thinking 187–188; inherent vulnerabilities 271–272; major cuts 271; modernization 270; military R&D 430–431; redundancies 271; second generation 81–97; space weapons 350–351; UN study 248; war-fighting utility 271.

**Peace:** conflict 152–153, 162–163, 167; conversion 1–147; economic cooperation 175–178; economic diplomacy 178–179; global perspective 175–; gradual change 184; Holland 213; interdependence 151–173; international organizations 175–185; mutual interests 153–155; nuclear age 187–190; peace education in Holland 205–211; peace movement in Holland 213–221; peace research 155–157; peaceful economy 129–140; role of perception 163–164; role of science and technology 261–292; values 243.

**Peace research:** complex interdependence 164–165; consequences of conventional warfare 191–195; Dutch peace movement 223–230; effectiveness of peace movement 224–227; establishment oriented 155–157; focus on science and technology 258–259, 261–292, 343; in history 228–229; journal 243; methodology 227–228; military R&D 258–259, 381–382; negligent on military technology 258; peace education 211; peace movement 220–221, polemythology 197–203; PRIO 258–259; resources 243; SIPRI 258–259.

**Research and development:** ambiguities 251, 423; application 251–252; basic research 251, 278; civilian and military technology 280–286; data 262–267, 362; evolution 359–360; expenditures 263–264, 280–281, 372–373; Federal Republic of Germany 280–283; France 280–283; global budget 252, 267; Japan 280–283; lines of research 305–315; militarization of 264–278; North–South distribution 262, 266, 287–288, 362; number of scientists & engineers 263, 365, 373; process 296–297; quantitative assessment 252–255; R&D division of labour 360; R&D/GDP ratio 363, 373; stages 251; state in developing countries 361–367; technicians in R&D 366; UK 280–283; USA 280–283.

**Science and technology:** application 245–246, 262; Archimedes 245; Bertrand Russell 245; civilizational mission 289; conversion 70–75, 133–134, 289; Eureka 67–69; European programmes 60–61; high technology 55–67;

impact on war and peace 261–292; Japanese programmes 61–62, 69–70; Leonardo da Vinci 245; Michelangelo 245; militarization 33–51, 264–278; promises and threats 262; purpose 245; SDI 62–67; state of the art 53; technological landscape 53–55; technological programmes 53–79; US programmes 56–60.  
*Security*: interdependence 151–157; nuclear age 151–152; role of nuclear weapons 187–190.  
*United Nations*: abortion of R&D study 248, 250, 252, 257–258; Department of Disarmament Affairs 247, 249, 255; disarmament–arms race dilemma 246–248; disarmament experts 249; draft version of military R&D study

255–257; excerpts of R&D study 411–444; game of politics 249–250; highlights of military R&D study 250–252; making of UN studies 248–250, 255, 257–258; secretariat 248, 258; Soviet attitude 250; study on military R&D 245–259, 411–444; study on nuclear weapons 248, 310; Sweden and UN studies 248, 250, 255; US role 248.

*War*: causes 293; consequences of conventional warfare 191–195; nuclear age 187–190; number since WW II 286; role of military R&D 261–292; war figures 197–203; war years 197–198.
